BACK-END DEVELOPER

WILL YOU BE THE BACKBONE OF OUR DEV. TEAM?

Do you prefer a technical challenge over an easy job? Do you enjoy both designing and building a platform's architechture from the ground up? Are you eager to work on meaningful projects of clients with a mission? Then join us at Unc Inc as a back-end developer.

WHO ARE WE?

Money makes the world go round, they say. But life revolves around more than that. With creativity and technology we can improve the world in all respects. That's why we design and build digital products with our partners and end-users that add positive impact to financial rewards. Platforms, apps, websites, everything we make must be beautiful, inspiring, functional and future-proof. Therefore our best work is for the goals we believe in.

WHAT YOU'LL BE DOING

You will work on very diverse projects, in a small, self-managing and multidisciplinary team. You will have a lot of responsibility and will sometimes communicate directly with the customer, if you like. Sometimes these are start-ups for which you can create the entire foundation of the platform, sometimes these are large platforms that are heavily used. Always, however, you'll get the opportunity to develop and share your knowledge with us, as we will do with you. This way we'll learn from each other, from the projects we do, every day.

WHO YOU MIGHT BE

You understand functionality and are able to challenge the UI/UX designer, as he will challenge you. That way you'll help each other in creating the best work. Your profession is as much a job as it is a hobby; you're simply obsessed with writing beautiful code that boils down complex problems to simple solutions. Naturally you have experience with PHP and preferably with Drupal 8 or, alternatively, Symfony. You like applying principles such as Gitflow, feel at home in a Linux shell and know how to work with services like MySQL, Redis and Memcache. Experience with Drupal 7 and Node.js is also beneficial. You're skilled at debugging so experience with tools like XHProf or Xdebug is, again beneficial. You have at least three years of relevant work experience, you're ambitious and dedicated to creating great work. Finally you have a strong sense of responsibility and aren't hesitant to take initiative. But above all, you're sociable and a good laugh.

WHAT WE OFFER

We offer you a fulfilling job of four to five days per week with a good salary. In a young, close-knit and friendly team you work on cool projects for non-profits, start-ups, and other initiatives. In addition to the positive impact, we also select work on the technical challenge it provides us. Coding for sensors, beacons and Internet of Things are just a few examples of this. We also do autonomous projects like The Coffee Copter as a means of playing around and learning new things. You will also have the opportunity to gain knowledge and inspiration on courses and events. And then there's our monthly 'Eve of Inspiration' where we share the things that inspire us.

WHERE WE ARE LOCATED

Our beautiful and spacious office is located at a small shipyard on the NDSM wharf. Surrounded by water, nice bars and all sorts of events, we offer a working environment that provides plenty of room for creativity and inspiration.

GETTING EXCITED?

Send your resume and motivation to jobs@uncinc.nl. Better yet, respond through LinkedIn (don't forget the motivation), and we'll reply within a week.
